

Finishing Iterations:  
In a rush, early, late

# Finished in a rush?

Probably something was skipped.  
Test and make sure everything is ok.

Plan some time at the beginning of  
the next iteration to recover from the  
“photo finish”.

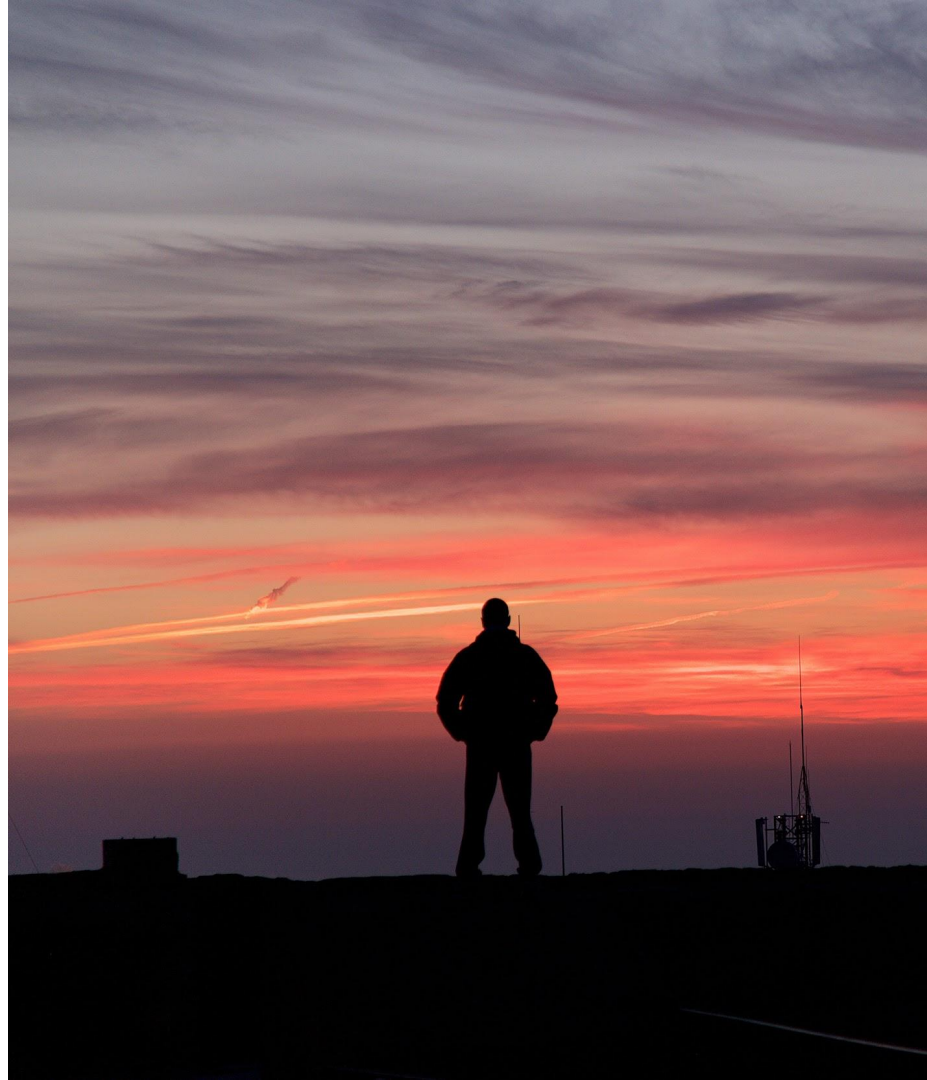

Review your task breakdown  
approach and adjust your Velocity.

# Finished early (with extra time)

- Is the Project going well?
- Is there anything you haven't fixed?
- Do you have any Bugs to fix?

Use your time wisely. Get one of your highest priority User Stories programmed for the next Iteration and start!

# Finished late =(

- Why were you late?
- Velocity problem?
- Estimation problem?
- Procrastination?

Maybe there is some code that hasn't been completed so you may expect to get some Bugs. Adjust before the next iteration!
